Education

The George Washington University (GWU)

May 2027

Bachelor of Science in Computer Science

Washington, D.C.

- **GPA: 3.83/4.00** | Presidential Scholarship Academic Recipient
- Tau Beta Pi Engineering Honor Society (Fall 2025 - Present) | 2025 Outstanding Academic Achievement Award
- **Dean's List** (Fall 2023, Spring 2024, Fall 2024, Spring 2025)
- **Courses:** Systems Programming, Game Development, Algorithms and Data Structures, Intro to AI

Technical Skills

Languages: Python, Java, TypeScript, C#, C, MySQL, HTML/CSS, JavaScript

Frameworks/Other: Node.js, Next.js, React.js, PostgreSQL, Git, Pygame

Developer Tools: Visual Studio Code, Cursor, Vim, Linux, Windows, OS, AWS

Projects

GCal Planner

March 2026 - Present

TypeScript, Next.js, React, Prisma, PostgreSQL, NextAuth, Google APIs

In Development

- Built a goal and task planning web app with **Next.js** (App Router), **TypeScript**, **Prisma**, and **PostgreSQL**, including **Google OAuth** and session handling via **NextAuth**
- Integrated **Google Calendar API** and **Google Tasks API** (incremental and full sync, timezone-aware scheduling) and connected task actions to calendar events
- Implemented **authenticated API routes** with validation and **user ownership checks** for **CRUD** on goals, projects, and tasks; dashboard views for today, upcoming, and overdue work

University Advising Registration Application

March 2025 - May 2025

Python: Flask + MySQL

- Developed a database-integrated full-stack application to facilitate registration for **75+ students** and completion of **25+ advising forms** across several platforms
- Designed experimental protocols to investigate advisor-student communication bottlenecks, leading to a **40% reduction** in manual form processing and improved advising organization
- Utilized **Python**, **Flask**, and **MySQL** for backend logic and data management, and **HTML/CSS** for frontend styling, enabling automated audits and prerequisite checks

Linux Shell Simulator

October 2024 - December 2024

C github.com/AnandB18/mini_shell

- Implemented a Unix shell in C with a parser for semicolon-separated command sequences, pipelines (`|`), and stdout/stderr redirection; executed programs with **fork/exit**, **pipe**, and **dup2**, closing unused FDs to avoid hangs
- Implemented built-ins (e.g., **cd**, **exit**) in the parent shell and supported foreground vs background pipelines (**&**) with a job list and **waitpid**-style waiting/reaping; handled **SIGINT/SIGTSTP/SIGCHLD** so signals target foreground children without terminating the shell
- Built a prefix-trie (**ptrie**) command autocomplete system integrated with the interactive input loop, enabling low-latency tab completion of command names

Experience

GWU School of Engineering & Applied Science

June 2024 - December 2025

Intro to Algorithms and Data Structures Teaching Assistant

Washington, DC

- Mentored **30+ students** to strengthen conceptual understanding of fundamental data structures through **Java**
- Assisted students in troubleshooting projects through **1-on-1 meetings**, improving debugging skills
- Collaborated with **5-8 faculty** to design coursework, refine curriculum, and coordinate teaching assistants by developing lab materials and aligning weekly instructional goals

Additional Information

Certifications: AWS Certified Cloud Practitioner

Leadership: GW Software Engineering Club Executive Board Member
